

Software Engineer .NET 6 (m/w/d)

Digitalization of Wire Harness Production

DiIT GmbH, based in Krailing near Munich, is the world's leading manufacturer of integrated software solutions for controlling the production of wire harnesses in the automotive industry. Topics such as autonomous driving and electric drives will seriously change these products and their production. We accompany our customers in this challenging phase and would like you to join us!

As an independently managed company, DiIT is part of the Schleuniger Group. Schleuniger is a globally active technology group and a leading supplier to the cable processing industry.

Our offer

- Plenty of room for your own ideas
- Flexible working hours and mobile working
- Modern working environment in a cloud-based infrastructure
- Welcoming office in one of the most beautiful regions of Germany
- Informal, open atmosphere
- Support for your individual development
- Very secure job in a healthy company
- Participation in the „JobRad“ program

Your tasks

- As part of the team, you will work on the new generation of our software for production control in our customers' factories.
- An important aspect here is also the implementation of interfaces to the machines and equipment used in production.
- We work together in small, agile teams and rely on modern technologies, frameworks and tools.

Your profil

- In the field of software development, specifically in the current Microsoft stack, you have profound expertise.
- You enjoy designing software, even for non-trivial problems, and you have a good command of the implementation up to the start of operations.
- You are interested in cloud service models and ideally already have practical experience with common platforms (preferably Azure).
- You are open-minded towards new technologies as well as ambitious requirements and approach them with a high level of commitment and distinct personal responsibility.
- Achieving a result together as a team is a highly motivating goal for you, to which you can make an important contribution not least through your communicative manner (gladly in German and English).

We are looking forward to your application!
